

Fundamentally, organisations are a network of conversations. The success of your teams and organisation depends on the productivity of these conversations. Learn how to design and facilitate intelligent conversation necessary for productive collaboration. Collaboration is often treated superficially, but we offer you solid theory and robust methodology that gives you a real skill in practical collaboration.

For anyone whose success depends on intelligent collaboration with other people, Designing Collaboration offers a deep exploration of collaboration as a system of interconnected learning conversations.

During this workshop you will learn a practical methodology for diagnosing dysfunctional collaborations and designing productive collaborations that accelerates agreement necessary to manage in challenging situations. A one-day workshop introduces the methodology, and a two-day workshop gives opportunity for additional practice to boost confidence and mastery.

Learning Options.

1. Virtual or in-person

1-day (or 2 x 4-hour)
Optional 2nd day for additional
practice

In-house

R27 500*
R27 500*
**up to 20 people ex VAT*

2. Self-study

10 x 20-minute videos @R100 each R1 000 ex VAT

This workshop will equip you to:

1. Develop deep insight into the theory underpinning systemic collaboration.
2. Understand teams, projects and organisations as a conversation network.
3. Understand the principles and practice of collaboration design.
4. Use a systems approach to diagnose and re-design unproductive, dysfunctional collaboration.
5. Structure intelligent thinking via creative representation design.
6. Diagnose and design intelligent learning conversations.
7. Understand the principles and practice of formal and informal collaboration facilitation.
8. Accelerate agreement and commitment throughout the collaboration network.
9. Facilitate real change in complex situations.
10. Apply Deliberate Collaboration practically to your specific collaboration challenges.
